

# **Schedule Of Customs Duties**

The Taric database integrates all measure relating to the Tariff. It allows you to find the goods code for the item you are importing from outside the community to the required ten-digit level. The taric code is comprised of the CN code with further subdivisions. Taric code changes generally happen on the 1st of January each year. Particular caution is required in this regard as changes of this type can occur at irregular intervals and with little notice from the EU Commission. The taric database will allow you to search for codes as well as view the following:

- Third Country duty
- Suspension of duties
- Tariff Quotas
- Tariff Preferences
- Anti-dumping Measures
